August 2026

Dear Hiring Manager,

I am writing to express my interest in a DevOps / DevSecOps Engineering role at your organization. With over three years of production experience across AWS cloud infrastructure, Kubernetes orchestration, Terraform-driven infrastructure automation, and CI/CD pipeline engineering, I bring a strong track record of building reliable, secure, and scalable systems that reduce manual effort and improve delivery speed.

In my current role at Interactive Bees, and previously at Maxtra Technologies and Infyq Solutions, I have designed reusable Terraform modules for EC2, VPC, S3, and IAM that cut provisioning time by 70%, built a production Kubernetes environment with Helm and Argo CD for zero-downtime GitOps deployments, and stood up a full-stack observability platform with Prometheus, Grafana, and Loki across 15+ servers that reduced MTTR by 60%. On the security side, I have implemented Wazuh SIEM monitoring, IAM and OS hardening, and vulnerability assessments for government infrastructure, and led a multi-stage Jenkins/GitLab/Docker pipeline that brought deployment time down from hours to under 10 minutes.

Beyond the technical stack, I have led and mentored a team of six engineers, reducing manual operational effort by 80% through automation and process improvements. I hold AWS Certified Cloud Practitioner and AWS Certified AI Practitioner certifications, and I am comfortable working across both Linux (RHEL, Ubuntu, CentOS) and Windows Server environments, as well as hybrid and multi-cloud setups spanning AWS, Azure, and GCP.

I would welcome the opportunity to bring this combination of infrastructure automation, observability, and security expertise to your team. Thank you for considering my application — I look forward to the possibility of discussing how I can contribute to your organization.

Sincerely,

Ashmit Kumar Sinha
